MEATS BY LINZ Where's the Beef?

Cattle By-Products

When most people hear the word beef, they think of steaks, roasts, or burgers—the premium cuts we proudly provide. But the story doesn't end there. The beef animal offers far more than just what ends up on your plate. Beef by-products are made from the parts not used for traditional cuts of meat; and they're found in everyday items you might not even realize. Some are edible, like gelatin derived from hooves and bones, used in sweets like marshmallows. Others are inedible but essential—leather from hides becomes baseball gloves, belts, and more. Even life-saving medications, like insulin, can be sourced from internal organs.

BONES/HOOVES/HORNS

adhesives	dice
bandaids	football helemt
buttons	glass
charcoal	glue
china	lamination
combs	pet food
conditioner	photo film

piano keys plant food plastics plywood shampoo toothbrushes wallpaper

FAT

antifreeze	de
